

White Paper: SecureCore -- AI-Guided Distributed Engineering for Mixed-Clearance Integrated Product Teams

Abstract:

SecureCore is a next-generation architecture and workflow model designed to modernize and secure distributed engineering for Integrated Product Teams (IPTs) operating across mixed-clearance levels. It integrates compartmentalized development environments, AI-assisted task routing, and zero-trust data segmentation to allow unclassified contributors to securely support classified missions -- without exposing sensitive systems. By streamlining collaboration, enforcing clearance-aware boundaries, and embeddi...
